BioConstruct erects the first biogas plant abroad

Cooperation with Dutch project developer has been started successfully

Melle, February 25th, 2009. After thorough preparation BioConstruct GmbH - one of the leading manufacturers of turn-key biogas plants – takes the first step into the European countries. „We were looking for a liable partner for the market entry in the Netherlands and we have found Schücking Energieprojecten B.V. located in Enschede.“, says Henrik Borgmeyer, managing director of the company. The Schücking Energieprojecten already operates several biogas plants in the Netherlands and has chosen BioConstruct GmbH as the erector of the turn-key construction of the biogas technology in Het Haantje. This is a 6,5 MW project. For BioConstruct GmbH this is the thoroughly prepared entry into the foreign business. The waste fermentation in the Netherlands is the first focus. Henrik Borgmeyer: „Of course, we hope to develop a market in the Netherlands by means of this challenging reference project.“ The biogas plant in Het Haantje is a further milestone for the plant constructor and demonstrates the versatility of the company. BioConstruct GmbH erects waste fermentation plants with a capacity within the MW-range as well as small and compact agricultural biogas plants from 150 kW upwards. Besides the engagement in Germany and in the Netherlands, BioConstruct GmbH is also focused on Spain, Italy and on the Czech Republic. Here are some projects under way whose erection is planned 2009/2010.
